RESEARCH DIRECTION & INTERESTS

Computational displays are emerging as transformative platforms for augmented reality (AR) and virtual reality (VR). My goal is to develop **an end-to-end pipeline—from graphics to human visual perception**—that advances display technologies and ultimately delivers perceptual realism. A central challenge lies in bridging the gap between machine intelligence and human perception driven by visual stimuli. To address this, I investigate a *proxy* model of human visual perception as a foundation for advancing the pipeline. This integrated approach will enable exploration of new design spaces tailored to human vision, and ultimately bring us closer to passing the “**Visual Turing Test**” with next-generation computational displays.

Not only limited to the display applications, I take **a fundamental approach to understanding how humans respond to high-dimensional light** and use these insights to guide the human-vision-inspired design of hardware (displays, imaging electronics, vision sensors) and software (efficient algorithms for robotic vision). This synergy of perception, hardware, and computation aims to establish next-generation spatial computing platforms for seamless human computer interaction.

Broadly, my research interests span AR/VR, computational 3D displays, computational imaging, computational optics, visual perception, computer graphics, and human computer interaction.

EDUCATION

M.S. - Ph.D.	Electrical and Computer Engineering Seoul National University, Seoul, Republic of Korea Advisor: Prof. Byoungho Lee (before his passing), Prof. Yoonchan Jeong Thesis: Perceptual studies on holographic near-eye displays	2017.3 – 2023. 8
B.S.	Electrical and Computer Engineering Seoul National University, Seoul, Republic of Korea	2012. 3 – 2017. 2

WORK EXPERIENCE

Research Associate	University of Cambridge, Cambridge, UK - Advisor: Prof. Rafał K. Mantiuk, Graphics & Displays	2024. 3 – present
Postdoctoral Researcher	Seoul National University, Seoul, South Korea - Advisor: Prof. Yoonchan Jeong, OEQELAB	2023. 9 – 2024. 2
Research Collaborator	Meta, Seoul, South Korea - Manager: Wai Sze Tiffany Lam, Optics & Display Research	2023. 6 – 2023. 8
Research Scientist Intern	Meta Reality Labs, Redmond, WA, USA - Manager: Ying ‘Melissa’ Geng, Optics & Display Research	2022. 8 – 2023. 1

HONOR AND AWARDS

- [A1] Best Paper Award (Honorable Mention) (~5% among the acceptances), ACM SIGGRAPH Asia, 2024
- [A2] Sejong Science Fellowship (overseas track) (~\$50,000), NRF Korea, 2024
- [A3] Technical Paper Award (Silver Prize), Samsung Display, 2023 – [SIGGRAPH Asia, 2023]
- [A4] Best Paper Award, OSK Conference on Optoelectronics and Optical Communications (COOC), 2023
- [A5] Researcher of the Year Award (Project), SNU OEQELAB, 2020
- [A6] Best Poster Paper Award, International Meeting on Information Display (IMID), 2019

- Summary: Modelling aberration of systematic and visual optics with optical path tracing for rendering aberration-corrected hologram and followed by user validations with holographic displays

RESEARCH EXPERIENCE

Holographic Displays

- Speckle reduction
 - with profile-engineered light sources and partially coherent light sources
 - with jointly designed metasurface and hologram
 - with jointly optimized hologram frames for temporal multiplexing
- Computer-generated hologram optimization for a limited bit-depth, phase/amplitude-only spatial light modulator with different graphical assets
 - with RGB image / RGB-depth map / Light field
- Optical/visual aberration correction
- Model training with camera-in-the-loop strategies
- Acceleration of computer-generated hologram rendering speed with parallel computation

Light field Displays

- Compressive light field displays with additive/attenuation-based layers
- Super multi-view displays with directional backlight

Computational Imaging

- Elemental image acquisition with light field camera
- Quantitative phase imaging with digital holography

Vision Science and Applied Perception

- User experiment design, conduct, and analysis:
 - Optometry-based experiments (accommodation response, eye tracking, eye aberration measurement)
 - Psychophysics experiments (QUEST, method of adjustment)
 - Subjective quality evaluation experiments (pairwise comparison)
 - Interaction-based experiments (feature matching)
 - Questionnaire-based experiments (visually induced motion sickness)
- Image processing based on human visual characteristics (color vision, spatio-temporal vision, contrast vision, binocular vision) and optical characteristics of the human eye (abnormal curvature, apodization, aberration)

Perceptual Graphics with Machine Learning

- ‘White-box’ perceptual quality metrics for display evaluations
 - Model training with different datasets
 - Psychophysics-based low-level model training
 - Metric calibration with display – quality dataset
 - Open-sourcing large-scale dataset
 - Evaluation of quality metrics
 - ‘Explainable’ perceptual loss functions for graphics optimization
-

SKILLS

- **Programming languages & tools:**
 - Programming: MATLAB, Python, PyTorch
 - Optical design: ZEMAX
 - Hardware control: Labview, Arduino
 - Rendering acceleration: CUDA
 - Graphics rendering: Unity C#, Blender
 - Prototype design: Autodesk Fusion 360
 - Vision science experiment: Psychtoolbox
 - Statistics: Scipy
 - Collaborative tools: git
- **Experiment experiences:**
 - **Computational displays:**
 - Holographic display - phase modulators, digital micromirror devices
 - Light field display - multi-layer, multi-view, integral-imaging
 - High dynamic-range display
 - Laser/LED-based experiments
 - Multi-device analog synchronization (display - light source - scanning device (MEMS or galvo mirror))
 - AR/VR bench-top displays implementation and HMD prototyping
 - Calibration - 2D/3D geometry, display photometry, colorimetry
 - **Subjective/objective user experiments:**
 - Quality assessments - pairwise comparison
 - Optometry - eye-tracker, power refractor, aberrometer
 - Psychophysics - QUEST, method of adjustment
 - **Computational imaging:**
 - Digital holography
 - Adaptive optics
- **Language:**
Korean (Native) / English (Fluent)

RESEARCH EXPERIENCE - *Projects*

Evaluation metric of graphic data based on three-dimensional display for immersive extended reality

September. 2024 – August. 2025

Principal Investigator (Funding amount: 73,500,000 KRW/yr, 1 yr), National Research Foundation of Korea

- I investigated an evaluation metric of graphic data delivered by volumetric 3D displays, and extended the metric as a loss function to optimize the display graphics specifically tailored to human visual system.

AR image/video quality metrics

March. 2024 – present

Research Associate (PI: Prof. Rafal K. Mantiuk, co-PI: Dr. Alexandre Chapiro, Funding amount: unknown), University of Cambridge, in collaboration with Meta Reality Labs, Applied Perception Science Team

- I investigate the optical and perceptual factors that influence the image and video quality presented on the optical see-through AR displays, and extend these findings to improve the state-of-the-art perceptual quality metrics for images and videos in AR.
- As a result, I culminated two papers on AR video perceptual quality dataset [SIGGRAPH Asia, 2024] with Best Paper Honorable Mention Award, and low-level contrast vision model of human perception [SIGGRAPH Asia, 2025]. I delivered two internal invited talks [Meta APS lab seminar, 2024, Meta DSR lab seminar, 2025].

Compact 3D VR light field displays

Aug. 2022 – Jan. 2023 (full-time, on-site), June 2023 – Aug. 2023 (part-time, remote)

Research Scientist Intern (Advised by: Dr. Kiseung Bang, Dr. Wai Sze Tiffany Lam, Dr. Ying “Melissa” Geng), Meta Reality Labs, Optics & Display Research, Redmond, WA, USA.

- I investigated a viable solution for realizing a super-multi-view display in an eyeglass form factor. I designed and implemented a bench-top prototype of the display, synchronized an RGB LED array and DMD, conducted optical experiments with cameras, conducted user experiments that measure accommodation response, and rendered light field content with geometric calibration. As a result, I delivered an internal final presentation, participated in two internal lab demos, and culminated a paper [Optics Express, 2024].

Development of optimal user experience (UX) in various screen form factors

December. 2019 - December. 2020

Lead Researcher (PI: Prof. Byoungho Lee, co-PI: Prof. Yung Kyung Park, Funding amount: 260,000,000 KRW/yr, 1 yr), Samsung Electronics, Visual Display division

* Joint project with Prof. Jong-Mo Seo (Seoul National University), Prof. Yung Kyung Park (Ewha University), Prof. Heejin Choi (Sejong University)

- I mainly wrote the proposal of the project and managed bi-weekly meetings.
- I built immersive VR spaces and conducted user experiments to configure the optimal layouts of user interface in a wide field of view condition. In detail, I constructed two UHD-resolution display systems with tiled flat panels (2x2 65-inch FHD panels)/an UHD projector (130-inch ~ 300-inch) with additional user-interactive graphical user interface, conducted user experiments with an eye tracker and simulator sickness questionnaires to effectively measure complete/incomplete eye blinking and subjectively estimate the visual discomfort driven by visual induced motion sickness (VIMS), respectively.
- I designed the user studies and analyzed the measured data (gaze direction, eye blinking, subjective score).
- I conducted user experiments after the ethics approval from host institutional review board and wrote the application document for following project:
 - Optimal User Experience Acquisition on Screen Form Factor.

Development of vision assistant HMD and contents for legally blind and low visions

March. 2019 – February 2024

Researcher (Lead Researcher, Jan. 2021 – Aug. 2022) (PI: Prof. Byoungho Lee, Funding amount: 250,000,000 KRW/yr, 8 yrs), Institute for Information & Technology Planning (IITP)

- I developed vision assistant head-mounted displays (HMDs) for users with refractive errors and visual field disorders. I built display prototypes (primarily holographic near-eye displays), measured subjects' refractive errors, optimized user-specific images, accelerated image rendering, evaluated display performance and participated in public demonstrations [IMID 2019, CES 2020, SIGGRAPH 2024].
- I conducted user experiments after the ethics approval from host institutional review board and wrote the application documents for following projects:
 - Reliability Evaluation of Holographic Near-eye Displays for Low Vision Assistance [Biomedical Optics Express, 2021]
 - Evaluation of Holographic Contents with Accommodation Response Measurement and Pairwise Comparison [SIGGRAPH, 2022]
 - Evaluation of 3D Holographic Contents Depending on Hologram Rendering Target based on Visual Difference [SIGGRAPH, 2024]
- I helped conducting user experiments after the ethics approval from host institutional review board and helped writing the application documents for following projects:
 - Reliability Evaluation of Vision Assistant Near-eye Display using Retinal Projection for Uncorrected Refractive Error
 - Reliability Evaluation of Retinal Projection Displays for Low Vision Assistance
- I led the perceptually-optimized holographic display project that primarily culminated three papers [Biomedical Optics Express, 2021, SIGGRAPH, 2022, SIGGRAPH 2024].

Development of viewing zone expansion for projection holographic HUD device

March. 2018 – March. 2020

Researcher (PI: Prof. Byoungcho Lee, Funding amount: 80,000,000 KRW/yr, 3 yrs), Samsung Display

- I developed a viewing zone expanded holographic head-up display (HUD) device with multiple laser diodes and a single SLM. I designed the optical system of HUD device with ZEMAX. It achieved 6x expanded viewing zone.

Research and development of overlapped fingerprint identification technology using laser

March. 2017 – March. 2018

Researcher (PI: Prof. Byoungcho Lee, Funding amount: 680,000,000 KRW/yr, 5 yrs), Projects for Research and Development of Police Science and Technology under Center for Research and Development of Police Science and Technology and Korean National Police Agency.

- I conducted an optical experiment in which latent fingerprints were dyed and then excited with a high-power laser to capture their fluorescence using a high-profile hyperspectral camera.

Development of printed lens array and optical path control technology for flexible bezelless display

November. 2017 – May. 2020

Researcher (Lead Researcher, Jan. 2019 – May. 2020) (PI: Prof. Yongtaek Hong, co-PI: Prof. Byoungcho Lee, Funding amount: unknown), Ministry of Trade, Industry and Energy

- I implemented a simulation tool of ray tracing given that the printed cylindrical lens is placed between the tiled, flexible bezelless displays.

PRESENTATION at DOMESTIC CONFERENCES

- [DC1] **D. Kim**, S.-W. Nam, Y. Kim, Y. Jeong "Metasurface-enabled high-quality computer-generated holography," Optical Society of Korea, Optics and Photonics Congress (Winter) 2024, Suwon Convention Center, Suwon, Korea, Feb. 2024. (Oral Presentation) (**Invited paper**)
- [DC2] **D. Kim**, M. Chae, J. Lee, Y. Jeong, and B. Lee "Recent progress on holographic displays for AR/VR applications," Optical Society of Korea, Optics and Photonics Congress (Summer) 2023, ICC Jeju, Jeju, Korea, Aug. 2023. (Oral Presentation) (**Invited paper**)

-
- [DC3] **D. Kim**, S.-W. Nam, and Y. Jeong “Computer generated hologram optimization with light field-based focal stack supervision,” Optical Society of Korea, Conference on Optoelectronics and Optical Communications (COOC) 2023, Hanhwa Resort, Busan, paper W1I-I.04, May 2023. (Oral Presentation) (**Best Paper Award**)
- [DC4] C. Yoo, J. Jeong, B. Lee, **D. Kim**, E. Lee, and B. Lee, “Retinal-projection Near-eye Display for Pupil movement”, Optical Society of Korea, Optics and Photonics Congress (Summer) 2020, BEXCO, Busan, paper WPP-III-1, Jul. 2020.
- [DC5] **D. Kim**, S. Lee, and B. Lee "Analysis of optical gap in multiplicative light field displays based on ray tracing method," Optical Society of Korea, Optics and Photonics Congress (Summer) 2018, BEXCO, Busan, Korea, paper WP-III-6, Aug. 2018.
- [DC6] **D. Kim**, Y. Jo, S. Lee, S. Moon, and B. Lee, "Attenuation-based multi-layered display providing continuous accommodation cues," Optical Society of Korea, Optics and Photonics Congress (Winter) 2018, Gwangju Kim-Dae-Jung Convention Center, Gwangju, Korea, paper FP-VII-3, Feb. 2018

INVITED TALKS

- [T1] Towards Building Psychophysics-informed Perceptual Metrics for Augmented Reality Displays, SID Display Week, Los Angeles, USA (2026.5)
- [T2] Towards Building Psychophysics-informed Perceptual Metrics for Next-generation Displays, Lab Seminar (virtual), HPX team, Nvidia, hosted by Dr. Jae-Hyun Jung (2025.11)
- [T3] Towards Building Psychophysics-informed Perceptual Metrics for Next-generation Displays, Lab Seminar, Display System Research, Meta Reality Labs, Redmond, USA, hosted by Dr. Changwon Jang (2025.10)
- [T4] Towards Building Psychophysics-informed Perceptual Metrics for Next-generation Displays, Lab Seminar (virtual), Quantified Experience team, Magic Leap, hosted by Dr. Agostino Gibaldi (2025.10)
- [T5] Perceptual Reality with Next-generation Computational Displays, Lab Seminar (virtual), Korea Electronics Technology Institute, hosted by Dr. Jisoo Hong (2025.9)
- [T6] Perceptual Reality with Next-generation Computational Displays, Lab Seminar, Computational Imaging group, POSTECH, Pohang, Korea, hosted by Prof. Seung-Hwan Baek (2025.8)
- [T7] Towards Building Perceptual Metrics for Next-generation Displays, IMID, Busan, Korea (2025.8)
- [T8] Perceptual Reality with Next-generation Computational Displays, Lab Seminar, Seoul National University, Seoul, Korea, hosted by Prof. Yoonchan Jeong (2025.8)
- [T9] Perceptual Reality with Next-generation Computational Displays, Department Seminar, KAIST Electrical and Electronic Engineering, Daejeon, Korea (2025.8)
- [T10] Perceptual Reality with Next-generation Computational Displays, Department Seminar, Sungkyunkwan University Electronic and Electrical Engineering, Suwon, Korea (2025.6)
- [T11] Perceptual Reality with Next-generation Computational Displays, Department Seminar (virtual), UNIST Computer Science and Engineering, Korea (2025.5)
- [T12] Towards passing the Visual Turing Test with holographic displays, High-beam Seminar (virtual), University College London, UK, hosted by Prof. Kaan Aksit (2024.10)
- [T13] Enhancing perceptual realism in holographic displays, Samsung Research, Seoul, Korea, hosted by Dr. Youngmo Jeong (2024.8)

-
- [T14] Perceptual evaluation of holographic near-eye displays, Applied Perception Science Lab Meeting, Meta Reality Labs, Sunnyvale, USA, hosted by Dr. Alexandre Chapiro (2024.7)
 - [T15] Improving perceptual quality in holographic displays, Group Seminar, University of Cambridge, UK, hosted by Prof. Daping Chu (2024.6)
 - [T16] Improving perceptual quality in holographic displays, Rainbow Lab Seminar, University of Cambridge, UK, hosted by Prof. Rafal Mantiuk (2024.3)
 - [T17] Metasurface-enabled high-quality computer-generated holography, Annual conference of Optical Society of Korea (Winter), Suwon, Korea (2024.2)
 - [T18] Improving perceptual quality in holographic displays, Holography advanced technology workshop, Seoul, Korea (2023.11)
 - [T19] Perceptual reality through holographic near-eye displays, Electronics and Telecommunications Research Institute (ETRI), Daejeon, Korea, hosted by Dr. Kihoon Hong (2023.9)
 - [T20] Perceptually realistic 2D, 3D holographic displays, IMID, Busan, Korea (2023.8)
 - [T21] Recent progress on holographic displays for AR/VR applications, Annual conference of Optical Society of Korea (Summer), Jeju, Korea (2023.8)
 - [T22] Perceptual Reality Through Holographic Near-Eye Displays, OSA FiO+LS AR/VR theme, Rochester, NY, USA (2022.10)
-

PUBLIC DEMOS

- [D1] SIGGRAPH 2024 Emerging Technologies – Holographic Parallax [Kim et al., 2024, SIGGRAPH]
 - [D2] CES 2020 – Tomographic near-eye displays [Lee et al., 2019, Nature Comm.]
 - [D3] IMID 2019 – Tomographic near-eye displays [Lee et al., 2019, Nature Comm.]
-

PATENT

- [P1] Multi-flexible display device having improved image discontinuity at panel boundary and method of manufacturing double-sided reflector therefor, Y. Hong, S. H. Lee, H. S. Yoon, B. Lee, C. H. Yoo, **D. Kim**, (Korea (granted (2021), KR102257615B1), USA (granted (2022), US11466838B2))
 - [P2] Method for optimizing holographic display and device thereof, B. Lee, B. Lee, **D. Kim**, S. Lee, C. Chen (Korea (granted (2024), KR102683827B1), USA (pending, US20250085664A1))
 - [P3] Holographic display using metasurface and metasurface optimization method, Y. Jeong, S.-W. Nam, Y. Kim, **D. Kim** (Korea (granted (2025), KR102784741B1), USA (pending, US20250028281A1))
-

TEACHING

- Lecturer
 - *Advanced Graphics and Image Processing* (2 hrs, AR/VR, Display Technologies), University of Cambridge, Michaelmas, 2025
- Guest lecturer
 - *Perceptual Reality with Next-generation Displays* (1hr talk), *Extended Reality*, University of Cambridge, Lent, 2025, hosted by Dr. Fangcheng Zhong

- *Towards Building Psychophysics-informed Quality Metrics for Next-generation Displays* (1hr talk), New York University (remote), Fall, 2025, hosted by Prof. Qi Sun
- Teaching assistant (Small group teaching)
 - *Advanced Graphics and Image Processing*, University of Cambridge, Michaelmas, 2025
 - *Introduction to Graphics*, University of Cambridge, Michaelmas, 2025 / Michaelmas, 2024
- Teaching assistant
 - *Introduction to Electromagnetics*, Seoul National University, Spring, 2019

SERVICES

- Session Chair:
KIDS × SID – IMID (2025)
- Reviewer:
Journal
Nature publishing group – Communications, Scientific Reports
Optica (Formerly OSA) – Optics Letters, Optics Express, Applied Optics, Biomedical Optics Express
IEEE – Transactions on Image Processing
ACM – Transactions on Graphics
ACS – Photonics
Elsevier – Displays

Conference
ACM – SIGGRAPH (2025), SIGGRAPH Asia (2025)
IEEE – VR (2026), ISMAR (2025, 2024, 2023)
Eurographics (2025)
- Member: ACM, Optica (formerly OSA), Optical Society of Korea, SPIE, KIDS
